

Silver Line[®]

IS : 14543

CM/L - 6643880

Food Safety Management Certified company

Purification of water is not only removal of solid contaminants and removal of unseen bacteria and viruses, but also removal of excess minerals, dissolved salts and keeping it with palatable PH.

Silverline is the pure bottled water which is rich in Oxygen and is purified using the world's leading technologies all together.

Silverline Packaged Drinking water is manufactured and marketed by Shanmuga Aqua Industries, Redhills, Chennai - 52.

We are one of the most prominent and successful packaged drinking water company from 2007. The company is completely automated and plant is managed by technically qualified and experienced professionals. The Manufacturing facility is capable of producing more than 2.5 lakh litres per day. The plant is certified by BIS and FSSAI. The company is an ISO 9001:2008 & 22000:2005 certified company.

Purification of Silverline Packaged Drinking water

Raw water is chlorinated in raw water tank.

Sand filter : The suspended matter in the water is removed and filtered.

Carbon filter : The activated carbon filter removes suspended matter and organic impurities present in water. It also removes bad smell if present in water and de-chlorinates the excessive chlorine.

Micron filter : At Silverline, water is passed through three sizes of micron filter with progressively smaller sizes of pour for filtration and to get crystal clear water.

R.O.Process : Reverse Osmosis filtering is by far the best method of purification of water available in the world except for distillation. At Silverline one of the finest RO process is being used and the resultant water is exceptionally purified.

UV sterilizer : When water is sterilized with UV rays, the presence of bacteria and virus in the purified water is completely ruled out. This process also increases shelflife of water.

Ozonator : Ozonisation not only kills all the viruses and bacteria, it increases the shelf life of purified water. At Silverline, this process is done with the use of Oxygen concentrator (medical grade oxygen) and not extracted from the atmosphere. Thus Silverline ozonisation is the best and safest.

Silver Ionization : The process of ionization resulting Oligodynamic effects offers a modern approach to water disinfection without the use of hazardous chemicals. The silver component destroys algae and kills proving to be an effective means to maintaining superior water quality. The dosage well within WHO, FSSAI and BIS limits.

Certifications :

- ISI Certificate from BIS
- Food Safety Certificate from FSSAI
- ISO 9001:2008 Certificate from BSI
- ISO 22000:2005 Certificate from BSA

Accessories : Hot and Cold Dispenser.

Our Product range :

- 20 Ltrs Bubble top cans
- 10 Ltrs Bubble top cans
- 2 Ltrs Pet bottle
- 1 Ltr Pet bottle
- 500 ml Pet bottle
- 300 ml Pet bottle

Special Features :

- ISO 9001 - 2008 certified company (from BSI)
- 8 stages of Purification
- Automatic Bottle filling Machineries
- Imported Machineries, filters and membranes
- Fully Stainless Steel plant
- 4 stages BT (Container) washing
- Fully equipped Advanced Laboratory
- Oxygen concentrator for boosting Ozone
- Silver Ionization
- TDS is maintained at the lowest and pH within the limit.
- Production capacity more than 2.5 lakh litres per day
- Managed by technically qualified professional
- Skilled technical persons and experienced labours
- Good manpower to deliver our products
